

White House Visitor Log Analysis

October–December 2022 vs. 2023

Teresa Ferrill

April 12, 2026

Purpose

- Identify visit patterns
- Compare across years
- Support operational decision-making
- **Call to Action: Improve Planning Using Data**

Audience

- White house operations leadership
- Familiar with data context
- Focused on decision, not technical detail

Medium

- Jupyter notebook for data analysis and visualization
- PowerPoint presentation for executive-level communication
- Separates technical detail from key insights

Design Considerations

- Clear and consistent formatting across visuals
- Minimal color to highlight key differences
- Logical flow from trends to detailed insights
- Gestalt principles used to group related visuals
- Focus on readability and quick interpretation

Key Finding 1 – Volume Increased

- **Higher visit volume in 2023 across holiday season**
- **Increase is consistent, not isolated**

Key Finding 2 – Activity is Concentrated

- **Small number of categories drive most activity**
- **Not evenly distributed across all groups**

Key Finding 3 – Timing is Predictable

- **Activity concentrated in late morning-afternoon**
- **Consistent across holiday months**

(James et al., 2021)

Key Finding 4 – Weekly Pattern

- **Weekday visits dominate**
- **Weekend activity is minimal**

Supporting Trend

- **Clear stepwise increase from 2022 to 2023**
- **Reinforces upward trend**

Recommendations

- Align staffing with peak hours (late morning – afternoon)
- Focus resources on high-demand locations
- Use historical data to anticipate demand
- Plan proactively instead of reacting to volume

Conclusion

- Visit patterns are consistent and predictable
- Demand increased in 2023 across holiday months
- Activity is concentrated and time-based
- Data enables proactive operational planning

(James et al., 2021; Cairo, 2016; Knaflitz, 2015)
