Introduction

- Analyze Netflix Top 10 performance across global and country datasets
- Identify patterns in global engagement
- Focus on cross-market content performance
- Support data-driven content investment decisions (Knafllic, 2015)

Define the Story

- Story
 - Global audiences are driving Netflix success
 - Cross-country titles consistently outperform
- Audience
 - Netflix Content Executives
 - Focused on high-level insights, not technical detail
- Purpose
 - Identify content that drives global growth
 - Recommend where to invest

Call to Action

- Invest in Globally Scalable Content
 - Prioritize titles with cross-country performance
 - Expand marketing for global top performers
 - Focus development on broadly appealing content
- Key question:
 - *Where should Netflix invest to maximize global growth?*

Overview of Data Used

- Data Sourced from Netflix Top 10 site
 - Global Top 10 performance trends
 - Country-level viewing patterns
 - Most popular titles by total viewership
 - Combined to identify scalable content opportunities
- Uses three Netflix Datasets:
 - All Weeks Countries
 - All Weeks Global
 - Most Popular

Design Approach

- Color: High contrast to highlight key insights
- Text: Minimal, focused on key takeaways
- Layout: consistent alignment across slides
- Spacing: Clean design to reduce cognitive load

Visual 1 – Global Engagement Over Time

- Engagement trends vary over time across global Top 10
- Sustained presence indicates stronger audience interest
- Early data may reflect incomplete reporting

Global engagement trends provide a high-level view of performance over time (Cairo, 2016)

Visual 2 – Top Title by Longevity

- Longer Top 10 duration reflects sustained engagement
- Consistent performers outperform short-term spikes

Sustained Top 10 presence reflects long-term audience engagement (Knaflitz, 2015)

Visual 3 – Country-Level Activity

- Country activity varies, but patterns reflect dataset coverage
- Similar counts suggest equal observation periods

Country-level activity highlights differences in market engagement

Visual 4 – Titles Across Countries

- Titles appearing in multiple countries perform more consistently
- Cross-country reach signals strong global appeal

Titles with cross-country reach consistently outperform others (Knaflic, 2015)

Visual 5 – Category Performance

- Films and TV both contribute to engagement
- Differences in total viewing highlight investment opportunities

Content format differences can guide future investment decisions (Kuhn & Johnson, 2019)

Visual 6 – Most Popular Titles

- High viewership does not always translate to long-term success
- Short-term popularity differs from sustained performance

Peak popularity does not always indicate sustained success

Visual 7 – Cross-Market Overlap

- Titles successful across markets are the strongest performers
- Cross-market overlap identifies top investment candidates

Cross-market performance is the strongest indicator of content success (Knaflic, 2015)

Key Findings

- Cross-market performance is the strongest predictor of sustained success
- Sustained Top 10 presence matters
- Global reach supports growth
- Short-term popularity is not enough

Global reach and sustained performance matter more than short-term popularity (Cairo, 2016)

Limitations

- Country comparisons may reflect data coverage
- Top 10 duration does not capture full engagement
- Results require contextual interpretation (Cairo, 2016)

Ethical Considerations

- Data sourced from publicly available Netflix Top 10 datasets
- No personal or sensitive data used – no privacy concerns
- Data Cleaned (standardized titles, numeric conversion)
- Aggregated data may mask regional differences
- Assumptions made (e.g., weeks in Top 10 = engagement)
- Visuals designed to avoid misleading conclusions

Conclusion

- Global and sustained performance matter most
- Focus on cross-market
- Prioritize scalable titles
- Use data to guide strategy
- Future work – incorporate additional engagement metrics (Kuhn & Johnson, 2019)
